Cyber Security Accelerator for trusted SMEs IT Ecosystems

Announcement and Invitation to end users' and stakeholders' training

The FORTIKA project aims to develop and demonstrate new technologies to minimise the exposure of small and medium sized businesses to cybersecurity risks. FORTIKA developed next-generation Cyber Security Services tailored to fulfill the needs of SMEs, both in terms of efficiency and costs.

Our solution is built upon a new hardware-based technology known as “Edge Acceleration” on top of which cyber security algorithms and services provide the required level of cyber threats protection in a SME environment. Our services incorporate advanced artificial intelligence algorithms to control effective countermeasures for protection against more and more sophisticated cyber-attacks.

We are honoured to invite you to attend remotely a Training Session intended for the end users and stakeholder communities of the cyber-security domain on:

Friday, April 24, 2020, 11:00-12:30 CEST

Attendants will have the opportunity to learn about the FORTIKA technology, its novelties, usability and how it works and also, to provide their feedback. Further, they will be informed on the ways that the cyber-security market will be benefited of FORTIKA.

Additionally, and based on FORTIKA participation in the European Cyber Security Challenge event (ECSC2020, 25-26 April 2020, <https://www.ecsc.gr>), a quick update on the details of the two cyber security challenges of FORTIKA that will be demonstrated, will be presented on the Training Session.

This is a totally **virtual** event. Please follow this link to attend:
